

## AMX1 SMS Messaging

Drax's Connect AMX1 is a highly versatile critical event management system for the management and control of one or more alarm systems.

In addition to providing class-leading alarm display, logging and analysis facilities, AMX1 now offers automatic SMS text messaging of alarms and events to standard mobile phones.

No special text message programming is needed. The text messages are generated automatically from the AMX1 and from its connected alarm systems. Facilities are provided to vector alarms to different mobile phone users depending upon the type of alarm. There are also facilities to prevent users from being bothered by SMS messages when they don't need or want them.

### Features

- Automatic SMS message generation – uses text from the AMX system
- Easy to set up – just enter the mobile phone numbers
- Up to 256 SMS Recipients (mobile phone users)
- Programmable availability time for each user - use this to make sure they get messages only during working hours
- User active/inactive setting – stop users getting messages when they are on holiday
- Manual message send facility
- Event Type message filtering – send just alarms, or just faults
- Keyword message filtering – send only alarms that contain certain key words or phrases
- Global Disable/Enable facility
- Small discreet SMS transmission unit (standard SIM card required) connects directly to AMX1.
